Short description:

Laser cut 3d print mash up

Description:

I've only posted models for part of the tower . The entire download is available for free after a simple email/newsletter registration at https://timeportalgames.com/wp/free-stuff/ see blog release at https://timeportalgames.com/wp/ This is a 3d print/ laser cut mash up. It is a 28mm fort/castle. It is totally component based allowing you to make a structure of any scale and dimension in regards to exterior contour. The fort pictured is only a proof-of-concept build and is not ment to amaze anyone. The total potential of this design is huge compared to what I am showing here. This release is open source, it took a while because of all the parts but it really went fairly quick for me when you consider all the parts made, taking about a month of my sparse free time from start till end.

If you can, please use the online documentation found at http://www.youmagine.com/designs/infinite-castle-design because those may have been been updated. Also, there you can interact and provide praise and/or feedback.
